

## **Appendix B: Management Zone Descriptions**

The NCA would be subdivided into three management zones, the Front Country Zone, the Rustic Zone, and the Wilderness Zone. Zones are designations that represent landscapes, visitor use patterns, and management philosophy. Managers use zones to establish criteria to provide guidance on how best to meet management objectives. The establishment of zones considers patterns of visitor use, visitor expectations, and resource characteristics and sensitivity. Within a zone, varying management techniques are prescribed to insure the conservation, protection, and enhancement of resources, as well as traditionally public uses. Zoning as a management tool assists BLM in the plan implementation process by setting a framework within which day to day management decisions are made. Certain actions may be appropriate in one zone, but unacceptable in another zone. Stipulations for the issuance of Special Recreation Permits, or the management of dispersed recreation, could be based upon zone boundaries and management criteria. Zones would benefit resource management by providing guidance for broad geographical areas. This guidance would cover both visitor use and resource protection.

### **Front Country Zone**

The Front Country Zone would correspond to the drivable playa of the Black Rock Desert and portions of the associated dune areas that receive high levels of visitor use. Small areas near Steven's Camp and in the Soldier Meadows area would also be included because of existing high levels of visitor use or the presence of structures. This zone would receive most of the visitor use and would represent the area where most large commercial permits would be issued. Likewise, this area represents the zone where other BLM management actions including necessary on-site visitor services would be most noticeable. Subject to area and route designations, access to and within the zone would generally not be limited to any type of vehicle.

### **Visitor Experience**

Visitors to the Front Country Zone would almost certainly encounter other visitors throughout the peak season, but would still find solitude during off-season periods. Opportunities to affiliate with other users in primitive campgrounds or undeveloped sites would be available. Although subtle, evidence of BLM management would be noticeable. Self-reliance would only be of moderate importance, with relatively low levels of challenge and risk. Visitors to these areas would only need to make a short time commitment with short drive times and no need to stay overnight. Access for people with disabilities would be difficult and challenging.

### **Resource Condition or Character**

The probability of encountering BLM staff in the Front Country Zone would be high. Visitors, sites, vehicle travel, and evidence of BLM activity would be managed to ensure resource protection and public safety. On-site controls such as vehicle barriers, educational outreach, and delineated use areas would be most evident in this zone. This zone would be primarily natural, but sights and sounds of other users and BLM resource management activity could be evident, especially on the playa during high use periods. Where visitor uses impact resources, the response would typically be to confine visitor uses to specific sites within the area, hardening drivable areas and restricting use on restored sites.

### **Appropriate Activities or Facilities**

This zone would be comprised of heavily visited areas, developed areas, and heavily visited attraction sites such as Stevens Camp and the Soldier Meadows Hot Spring Complex. The Front Country zone would be accessible by conventional motorized vehicles including sedans, trailers, RVs and some motor homes. Large group sites could be available throughout this zone. Primitive campgrounds could be used to concentrate uses in appropriate locations and minimize impacts to sensitive resources. Interpretation and educational opportunities would be emphasized in this zone, but on-site developments would be minimized where other outreach

techniques prove effective. Informational signage could be used to explain resource management or points of interest. . Occasional sanitary facilities could be located in the Front Country zone to protect user health and for natural and visual resource protection. Access for people with disabilities would generally be difficult and challenging, but some developed areas would be accessible. Large scale permitted activities would be concentrated in the playa portions of this zone

### **The Rustic Zone**

The Rustic Zone would include non-wilderness portions of the NCA where low levels of visitor use occur. Visitor use in the Rustic zone would be limited by the quality of roads and would require visitors to be experienced in off road travel. The zone would accommodate low to moderate levels of use, including groups, but visitors could expect to encounter few people, no services, primitive roads and few camping areas. Overnight camping locations near attraction areas could be limited to afford solitude and minimize resource impacts. Resource management projects would be minimally noticeable and designed to blend into the natural character of the area.

### **Visitor Experience**

The Rustic zone designation would provide a sense of immersion in the natural environment, and would be away from cabins, equestrian facilities, and high quality roads. Though visitors to the Rustic Zone would have a high probability of experiencing solitude, closeness to nature, and tranquility, human contact could be expected during peak seasons. Opportunities to experience a high degree of challenge and risk would be available for visitors using motorized or non-motorized equipment. Visitors using this area would need to make a moderate time commitment, which would require longer drive times or overnight stays. Access for people with disabilities would be difficult and challenging. Minimum on-site controls and/or restrictions could be present but would be subtle. The probability of encountering BLM staff or evidence of BLM management would be low.

### **Resource Condition or Character**

There would be a low probability of encountering BLM staff, even during times of peak visitation. BLM resource management activity and visitor services would be essentially unnoticeable. Minimum on site controls to manage OHV and camping uses may be present, but would be subtle. This zone would be predominately natural, and the sights and sounds of other users would be minimal. Where visitor uses impact resources, the response would generally be to close the sites to allow active or passive restoration.

### **Appropriate Facilities and Activities**

The Rustic zone would be comprised of low or moderately visited areas adjacent to heavily visited areas. Most areas along the emigrant trails and some popular hot spring destinations would also be within the Rustic Zone. Some areas in the Rustic Zone would serve as portals to wilderness areas, and the Rustic Zone would include Wilderness access routes and wilderness boundary roads. Travel throughout the Rustic Zone would occur on primitive roads and trails where high-clearance vehicles would be needed, and 4WD would be necessary in some areas. Group sites would be available near attraction areas and at some appropriate locations along the emigrant trails. Where damage is occurring to resources, designated campsites or other means could be used to disperse uses. Rustic and rudimentary facilities would be used primarily for site protection. If fencing were required it would be designed to blend into the natural environment. Interpretation and educational outreach would be emphasized off-site or through other mediums that do not require developed facilities. In cases where other outreach mediums are not effective in preventing resource impacts, small site identification, directional signage, or interpretive signs that are sensitive to zone character could be used. Temporary informational signage could be used to explain projects or new restrictions. Abandoned facilities would only be maintained if they provide interpretive opportunities or if the properties are eligible for the National Register of Historic Places.

## ***Appendix B: Management Zone Descriptions***

Occasional sanitary facilities could be located to protect user health and for the protection of natural and visual resources. Class I and II special recreation permits could occur in the Rustic Zone.

### **The Wilderness Zone**

The Wilderness Zone includes the areas that are Federally designated Wilderness as well as the Lahontan Cutthroat Trout (LCT) Area. The Wilderness Zone would offer the greatest opportunity to experience solitude and self-discovery. Contact with other visitors would be minimal in this zone and any sign of BLM resource management activity would be essentially unnoticeable.

### **Visitor Experience**

Visitors to the Wilderness Zone would have a low probability of encountering other visitors and excellent opportunities to experience solitude, freedom, closeness to nature, and tranquility. To experience much of this zone visitors would have to make a moderate time commitment, which would require long travel times and overnight stays. The environment would offer a high degree of challenge and risk. Access to people with disabilities would be most difficult and very challenging.

### **Resource Condition or Character**

The probability of encountering BLM staff or evidence of BLM management would be low. Restrictions and management controls would not be evident after entry. Excellent opportunities for dispersed camping would be available throughout the zone. This zone would remain the most natural of the management zones. Sights and sounds of other users would be minimal and in general would only be expected adjacent to or near wilderness access or boundary routes.

### **Appropriate Facilities and Activities**

This zone is comprised of large, sparsely visited areas, including federally designated Wilderness and un-roaded portions of the Lahontan Cutthroat Trout ISA. Travel through this zone would be by foot and horseback only. No on-site interpretive or educational development would be used. No facilities would be developed or maintained for user comfort. Abandoned facilities would only be maintained if they have been determined eligible for the National Register of Historic Places. Only Class I special recreation permits would occur in the Wilderness Zone.

Management Zone Description Table

	FRONTCOUNTRY	RUSTIC	WILDERNESS
<b>Visitor Management</b>			
<b>Camping</b>	<p>Vehicle camping would be limited to designated sites in Stevens Camp, Massacre Ranch, Soldier Meadows, and playa dunes and hummocks.</p> <p>Dispersed Camping allowed one-half mile from a designated site on the playa.</p> <p>Primitive campgrounds may be developed to concentrate use.</p>	<p>Dispersed camping allowed one half mile from designated sites.</p> <p>Vehicle camping would be limited to designated sites in High Rock Canyon, roaded portions of the LCT area, along Class A and B historic Trails and within playa dunes and hummocks.</p>	<p>Dispersed camping allowed one-half mile from designated sites.</p>

**Appendix B: Management Zone Descriptions**

<b>Facilities</b>			
<b>Buildings, Cabins, Horse corrals, Etc.</b>	Maintained for public use (Includes Steven's Camp, Massacre Ranch, Soldier Meadows) May develop campsites including: hardened tent pads, fire rings, tables, potable water, etc.	Maintained only when they provide interpretive opportunities or are eligible for the National Register of Historic Places May provide minimal facilities such as fire rings or hardened tent pads to define designated camping areas.	Maintained only when they provide interpretive opportunities or are eligible for the National Register of Historic Places
<b>Sanitary Facilities</b>	Provide adequate sanitation facilities at selected locations.	Provided only where essential for resource protection.	None allowed
<b>Public Outreach and Interpretation</b>			
<b>Outreach and Interpretation</b>	Concentrate developments at boundaries/portals to the NCA or where existing structures are located.  Low profile signs at limited number of trail and other resource sites.  Interpretive trails and self guided tours with minimal (small marker) on-site development.  Scenic overlook with interpretive materials located near periphery of	Emphasize off-site methods such as literature and selfguided trails, provide minimal signs/kiosks in areas experiencing adverse resource impacts.	No on-site methods allowed except when required to protect resources.

**Appendix B: Management Zone Descriptions**

	NCA.  On-site interpretive panels, kiosks and public educations programs.		
<b>Special Use Permits</b>			
<b>Special Recreation Permits</b>	Class I and II permitted throughout the zone.  Class I,II, III, and IV allowed within the permit area of the playa.	Class I and II permitted throughout the zone.  Class III emigrant trail tours permitted when consistent with the objectives for historic trails.	Class I events only. (outfitters/guides)  No competitive events Permitted.
<b>Film Permits</b>	Class I and II activities permitted throughout the zone.  Class I,II, III, and IV allowed within the permit area of the playa.	Class I and II activities permitted throughout the zone.	Class I permits only.
<b>Public Access and Transportation</b>			
<b>Accessibility</b>	All vehicle types	High clearance and some need for Four Wheel Drive	Horse and foot travel only
<b>Road Maintenance</b>	Maintained to provide access to front country sites.	Spot Fixes to Retain traditional access.	No road maintenance – Vehicle routes will be restored to natural conditions
<b>Trails</b>	Non-motorized or motorized trails may be constructed, closed, or relocated if human use results in adverse impacts.  Non-motorized trails could be developed to	Non-motorized trails may be constructed, closed, or relocated if human use results in adverse impacts.	Foot and Horse trails may be constructed, closed, or relocated if human use results in adverse impacts.  Non-motorized trails could be developed to
